Products from Bandage Cellulose, Highly Bleached

Description and application:

- Made of highly bleached cellulose fibres in the form of several creped single layers which are laid one above the other and felted with each other, TCF (totally chlorine-free bleached), meeting the requirements of DAB (monograph of highly bleached bandage cellulose - *cellulosum ligni depuratum*);
- Soft and abrasion-proof, can be used in various areas of medicine, in particular for wound care in combination with other wound care systems as an additional, cost-effective absorbent, protective and padding material; in the case of minor injuries as absorbant padding and for "minor disinfection".

Bandage Cellulose, Pre-Packed
